

SAT Math

What is the new 'SAT'?

The SAT Reasoning Test (Scholastic Aptitude Test and Scholastic Assessment Test) is a standardized test taken by high school students across the United States and around the world for college admissions in the United States. It also serves as a qualifying measure to identify students for college scholarships for most universities. The SAT is owned, published, and developed by the College Board, a non-profit organization in the United States.

The new SAT Reasoning Test (SAT) has two parts: Critical Reading (including writing and language), and Mathematics. The total maximum points from two parts is 1600. It is designed to measure problem solving ability, communication, and understanding complex relationships.

At MCS we only focus on Mathematics.

The New SAT contains 154 multiple choice questions:

Sections	Time(in minutes)	Number of questions
Reading	65	52
Writing and Language	35	44
Mathematics	80	58
Essay(optional)	50(optional)	1(optional)
Total	180 (without optional time)	154

The new SAT questions are more related to student's school courses, therefore the objectives for SAT Math at MCS are to help students to be familiar with the new SAT questions, to know the test-taking strategies, to review what they have learned in their junior and senior high schools, as well as to learn the topics which students will learn in their future school study.

Things needed to bring to the class:

1. A notebook. (for taking the notes during the class)
2. A binder or a folder. (to hold and organize the quizzes and tests)
3. Several No. 2 pencils, and
4. A graphing or scientific calculator.
